## Education

---

**Netaji Subhas University of Technology, Delhi, India**  
Bachelor of Technology, Computer Science and Engineering  
*Head of College Chess Team*

Nov 2022 – May 2026

**Delhi Public School, FAIPS, Kuwait**  
High School Diploma  
Captain of the Chess Team

Aug 2008 – Apr 2022

## Experience

---

**Coinswitch (PeepalCo)**  
*Software Development Intern (Backend)*

Jan 2026 – Present

- Developed a high-speed algorithmic trading engine in Go that pools user capital and executes large-scale orders against custom trading strategies, processing real-time market ticks and candle data to evaluate predefined trading conditions.
- Built a secure Telegram-based trading gateway in Go with JWT authentication and REST API integration, routing high-frequency user orders directly into the core execution engine.
- Architected a highly available Trailing Stop Loss microservice on Kubernetes with Kafka-based real-time stream processing, enabling reliable risk-management execution across thousands of concurrent orders.
- Built a replay and paper-trading framework that simulates post-market execution, allowing users and internal teams to validate strategies, test trading logic, and analyze performance without live market exposure.
- Migrated a core trading service from Java to Go, redesigning concurrent workflows to reduce p99 latency and compute costs at scale.

**Padhai Help**  
*Software Development Intern*

May 2025 – Jul 2025

- Developed modular RESTful APIs in Spring Boot to process learner progress data, optimizing PostgreSQL queries to support fast, secure synchronization for users.
- Designed relational database schemas and implemented core backend business logic to strictly enforce course prerequisites and automated progression rules at scale.

## Projects

---

### Gramin Sahayak (AI-Powered Rural Intelligence Platform)

- Engineered scalable data pipelines and a custom ML-based information detection system using Python and FastAPI to automatically extract, verify, translate, and serve localized government policy data, leveraging Sarvam AI for multilingual translation and accessibility.
- Built and deployed a Gemini-powered conversational assistant using a microservices architecture to handle natural-language queries, simplifying complex legal, agricultural, and policy information into actionable insights with sub-second response times.

### AI-Based Sign Language Translator

- Engineered a custom CNN architecture in Python to classify complex ISL and ASL hand gestures, implementing data augmentation techniques to achieve high recognition accuracy across varied datasets.
- Optimized deep learning models for edge deployment via TinyML, establishing offline, low-latency inference pipelines suitable for resource-constrained embedded systems.

## Skills

---

**Programming Languages:** Go, Python, C++, JavaScript

**Backend Technologies:** Spring Boot, FastAPI, REST APIs, Microservices, Distributed Systems

**Databases & Caching:** PostgreSQL, Redis

**Cloud, DevOps & Monitoring:** Docker, Kubernetes, AWS, Grafana, Kibana, New Relic, Last9

**Finance & AI:** Algorithmic Trading, Risk Management, NLP, LLM Integration, Data Pipelines

## Academic Achievements

---

- Solved 1000+ problems across LeetCode and Codeforces; LeetCode rating: 1700+.
- Secured a global rank of 500 in the International Mathematics Olympiad during school.
