Education

Netaji Subhas University of Technology , Delhi, India Bachelor of Technology, Computer Science and Engineering Head of College Chess Team	<i>Nov 2022 – May 2026</i>
Delhi Public School, FAIPS , Kuwait High School Diploma Captain of the Chess Team	<i>Aug 2008 – Apr 2022</i>

Experience

PolicyBazaar <i>Software Development Engineer</i>	<i>Sep 2026 – Present</i>
- Built internal dashboards for the sales team, consolidating pipeline and performance data from multiple sources into a unified platform for faster decision-making. - Optimized existing backend services to reduce API response times and infrastructure resource consumption, improving overall service efficiency. - Developed and maintained backend services across .NET and Go, contributing to platform features and service-level improvements. - Building an AI-powered chatbot with sign-language support, enabling users to interact with the assistant through sign language without requiring typing or speech.	
Coinswitch (PeepalCo) <i>Software Development Intern (Backend)</i>	<i>Jan 2026 – Aug 2026</i>
- Migrated a core trading service from Java to Go, redesigning concurrent workflows to significantly reduce latency and compute costs. - Architected a highly-available Trailing Stop Loss microservice on Kubernetes, utilizing Kafka for real-time stream processing to reliably execute risk-management logic across thousands of concurrent orders. - Engineered a secure Telegram-based trading gateway in Go, integrating JWT authentication and REST APIs to seamlessly route high-frequency user orders into the core execution engine.	

Projects

Gramin Sahayak (AI-Powered Rural Intelligence Platform)	<i>Demo ↗</i>
- Engineered scalable data pipelines and a custom ML information detection system using Python and FastAPI to automatically extract, verify, and serve localized government policy data to rural users. - Deployed a multilingual NLP chatbot via microservices architecture to process natural-language queries, reducing complex legal jargon into accessible insights with sub-second response times.	
AI-Based Sign Language Translator	
- Engineered a custom CNN architecture in Python to classify complex ISL and ASL hand gestures, implementing data augmentation techniques to achieve high recognition accuracy across varied datasets. - Optimized deep learning models for edge deployment via TinyML, establishing offline, low-latency inference pipelines suitable for resource-constrained embedded systems.	

Skills

- Programming Languages:** Go, Python, C++, JavaScript, Java, C#
- Backend Technologies:** .NET, Spring Boot, FastAPI, REST APIs, Microservices, Distributed Systems
- Databases & Caching:** PostgreSQL, Redis
- Cloud, DevOps & Monitoring:** Docker, Kubernetes, AWS, Grafana, Kibana, New Relic, Last9
- Finance & AI:** Algorithmic Trading, Risk Management, NLP, LLM Integration, Data Pipelines

Academic Achievements

- Solved 1000+ problems across platforms like LeetCode and Codeforces; LeetCode rating: 1700+.
- Secured a global rank of 500 in the International Mathematics Olympiad during school.
